

ARCHIT JAIN

TECH LEAD – DISTRIBUTED SYSTEMS & FULL STACK ARCHITECTURE

New Delhi, India • +91 9971577261 • archit.abj@gmail.com • linkedin.com/in/aj-archit-jain • aj-cody.github.io/architjain

PROFESSIONAL SUMMARY

Visionary Engineering Lead with 5+ years of experience architecting, decoupling, and optimizing hyper-scale distributed microservices for premier fintech and automotive marketplace platforms like CarDekho and Rupy. Technical leader adept at bridging complex systems engineering with business P&L, demonstrated by handling INR 100 Crore+ revenue verticals and executing fault-tolerant ledger migrations. Driven by an execution-first culture, steering cross-functional pods, evaluating system design trade-offs, and piloting next-generation Agentic AI frameworks to automate mission-critical organizational workflows.

SKILLS & STRENGTHS

Architecture & Design:	Distributed Microservices Architecture, High-Scale System Design, Event-Driven Architecture, Service Oriented Architecture (SOA), Monolith Decoupling, Low-Level Design (LLD), System Trade-off Analysis
Languages & Frameworks:	TypeScript, JavaScript (ES6+), Node.js, Express.js, React.js, Java, HTML5, CSS3
Database & Caching:	MongoDB (Document Modeling), MySQL / MS SQL (Relational Design, Procedures), Redis (Distributed Caching, Redlock)
Cloud, DevOps & Tools:	AWS (SQS, ECS, EC2, S3, Lambda), Docker Containerization, CI/CD (Bitbucket Pipelines, Jenkins), Git/ GitHub
AI Engineering:	LLM Orchestration, Agentic Workflows (LangChain / CrewAI), Vector Databases, Context-Embedded System Automation
Leadership & Governance:	Pod Ownership & Mentoring (10+ Engineers), Technical Governance, Cross-Functional Leadership, Performance Tuning, Test-Driven Development (TDD), Agile Methodologies, System Optimization

WORK EXPERIENCE

Tech Lead — CarDekho Group (Rupy) Gurugram, India | 04/2026 – Present

Scale: B2B & B2C FinTech Ecosystems (Digipartner & Digiagent)

- **Engineering Leadership & Delivery:** Spearhead a cross-functional engineering pod of 10+ developers and QA engineers driving continuous platform delivery for core high-traffic fintech systems (Digipartner and Digiagent).
- **Technical Vision & Governance:** Formulated architectural layouts, evaluated high-concurrency design trade-offs, and introduced microservices code quality patterns across core applications, reducing production escalations by 25% and boosting resilience.
- **AI Innovation & Workflow Automation:** Spearheading the architecture of a centralized payment portal, utilizing OpenAI's GPT and Claude APIs to automate complex loan cash flow reconciliations and dynamically calculate partner revenue disbursements, eliminating manual data tracking.
- **Infrastructure & Cost Optimization:** Spearheaded an infrastructure rightsizing initiative across AWS ECS clusters, AWS Lambdas, and Redis nodes, slashing monthly cloud expenditure by 18% without compromising system availability or throughput.
- **Operational Excellence:** Accelerated development lifecycles by structuring code review standards and agile sprint mechanics, driving a 15% efficiency gain and cutting time-to-market by 20%.
- **System Architecture & LLD:** Lead design reviews for high-concurrency microservices, ensuring performant event-loops, data encryption, and robust third-party B2B banking API integrations.
- **Team Mentoring:** Guide mid-level and junior engineers on distributed systems design patterns, clean code methodologies, low-level design (LLD), and query performance optimization.

Software Development Engineer III — CarDekho Group (Rupy) Gurugram, India | 10/2024 – 03/2026

Focus: Microservices Transformation & System Reliability

- **Monolith Decoupling:** Architected the migration of a high-dependency legacy 'Unified Journey' monolithic platform into modern, clean-bounded isolated microservices for NBFC and Marketplace workflows.
- **Data Migration & Integrity:** Successfully led a zero-downtime horizontal data migration of 3+ years of encrypted business-critical lead records, preserving 100% transactional data integrity.
- **Deep-Dive Performance Tuning:** Resolved critical memory leaks and unoptimized database queries across system boundaries, reducing aggregate server overhead and improving API response times by 40-50%.
- **Observability Engineering:** Institutionalized proactive debugging, application metrics tracing, and real-time alerting strategies that systematically cut production downtime incidents by 30%.

Software Development Engineer II — CarDekho Group (Rupy) Gurugram, India | 06/2023 – 09/2024

Focus: High-Volume Transactions & Scaling

- **Revenue & Business Growth:** Scaled and launched net-new credit financing verticals (new cars, two-wheelers, refinancing), processing high-volume transactions that generated over INR 100 Crore+ in new business revenue.
- **Asynchronous Infrastructure:** Engineered resilient, asynchronous onboarding and loan disbursement sub-systems leveraging AWS SQS event patterns to guarantee high availability and fault isolation.
- **Automation & DevOps:** Integrated automated continuous testing profiles via Bitbucket Pipelines and Docker, streamlining code validation cycles and upgrading overall platform deployment frequency.

Focus: Core User Flows & Components

- **Core Journey Engineering:** Programmed data-driven customer onboarding and automated payout journeys, directly optimizing customer data conversion metrics.
- **UI Standardization:** Engineered and published shared frontend React.js component libraries, standardizing internal design patterns and decreasing downstream UI development efforts by 25%.

Software Developer — India Today Group (Aaj Tak / Lallantop)**Noida, India | 12/2021 – 11/2022***Focus: Hyper-Scale Streaming & Media Platforms*

- **Hyper-Scale Ingestion:** Architected low-latency backend systems for live Election Day Results calculation, managing massive real-time traffic spikes smoothly across 6 high-traffic YouTube channels for millions of active users.
- **Distributed Caching:** Formulated multi-node Redis caching strategies above core endpoints for the Lallantop platform, accelerating throughput by 10x-15x.
- **Database Modernization:** Executed a complex database translation migrating the proprietary CMS backend from MySQL instances to flexible document schemas on MongoDB to resolve query locking bottlenecks.
- **Full-Stack CMS Features:** Programmed real-time collaborative features in the MERN ecosystem including WebSocket-driven takeover rights, draggable row set rankings, and an independent Audio Podcast platform boosting audience engagement by 30%.
- **Technical Mentoring:** Served as a lead developer on key modules, guiding fellow engineers on architectural patterns and mentoring freshers in React.js and JavaScript development.

Software Engineer — Newgen Software Technologies Ltd.**Noida, India | 03/2021 – 12/2021***Focus: Enterprise Banking Architecture*

- **Enterprise Workflows:** Designed robust billing management frameworks and secure transaction document workflows for a major US financial institution (Wilson Bank Project) using Java, JavaScript, and MS SQL.
- **Greenfield Fee Module:** Engineered a custom fee management sub-system from scratch, ensuring strict enterprise security rules governed all loan account activities.
- **Database Engineering & Stack Modernization:** Designed high-performance SQL Stored Procedures for safe transactional operations, and re-architected legacy account opening modules by porting codebases to Angular 9, Java, and MS SQL.
- **Rapid Advancement:** Earned a fast-track promotion from Trainee to full-time Software Engineer within 4 months based on exceptional technical execution and system ownership.

EDUCATION & CERTIFICATIONS**Bachelor of Technology (B.Tech.) in Computer Science Engineering****Aug 2017 – Jun 2021****Guru Gobind Singh Indraprastha University, New Delhi****CGPA: 8.98****Certifications:** Data Structures in JAVA – Coding Ninjas**AWARDS & ACHIEVEMENTS**

- **Innovation Awards:** 1st Runner Up, InnovateX Hackathon – CarDekho Group (Apr 2025)
- **Corporate Recognition:** Extra Miles Excellence Recognition – CarDekho Group (May 2023)
- **Academic Milestones:** Best Intern Award – Internity Foundation (Jul 2020)

INTERSHIPS & SELECTED PROJECTS

- **Speech-to-Text Analytics (Final Year Project):** Programmed a web portal translating real-time streaming audio records into structured diagnostic textual pipelines.
- **ReactJS Intern | Internity Foundation (05/2020 – 06/2020):** Optimized dynamic React component rendering metrics and layout structures.
- **Android Frontend Developer Intern | BSES (07/2019 – 07/2019):** Spearheaded UI/UX overhauls for dual Android mobile applications.
- **Web Development Intern | ABB India Ltd. (01/2019 – 03/2019):** Engineered core web system functionalities and intuitive UI integrations.
